

# Activity of the Week

**The Energy Resource Game** -Which energy resources are renewable? Which energy resources are nonrenewable? Which energy resources are inexhaustible? Play the energy resource game to find out! First, identify the resources, then click and drag the item to one of the 3 black holes. If you identify the resource correctly, it will disappear

---

For extra credit, correctly answer the questions below:

Your first name:

Your last name:

<p>1) Energy sources that <b>cannot</b> easily be made again are called <b>nonrenewable</b>. Which energy resource is <b>nonrenewable</b>?</p>	<p><input type="radio"/> Coal <input type="radio"/> Oil <input type="radio"/> Natural Gas <input type="radio"/> <b>All</b> of the above</p>
<p>2) Energy sources that <b>can</b> easily be made again are called <b>renewable</b>. Which energy resource is <b>renewable</b>?</p>	<p><input type="radio"/> Coal <input type="radio"/> Oil <input type="radio"/> Natural Gas <input type="radio"/> <b>None</b> of the above</p>

3) Some forms of energy are **so plentiful** that we will probably never run out of their energy. We call these types of energy resources **inexhaustible**. Give me one example from this activity that is considered to be inexhaustible:
